The following is an examiner's statement of reasons for allowance: Ahlgren (WO 99/18005, figures 1 and 2) is the closest art of record and teaches cable tie structure with a toothed elongate band part, an elongate insertion part 3 relatively narrower than the toothed elongate band part, a grip tab 4 with wing-like projections and a locking head with a slot-shaped recess 7 leading to a through-hole, which permits passage of the elongate insertion part, and a locking tongue 8. The difference is that the fastener of Ahlgren fails to show "the wing-like projections being relatively thinner than the grip tab to create a clearance interval between the elongate insertion part and the locking tongue and the wing-like projections, toward the grip tab, terminate in a ridge forming the band loop, the wing-like projections being inserted into the through-opening of the locking head and bearing against the opposing walls of the through-opening, to abut the locking head" (claim 1, lines 19-25). This combination of structure creating the clearance between the elongate insertion part and the locking tongue provides a very different design and function from that of Ahlgren and there is no suggestion in the art of record to modify the fastener of Ahlgren to have such structure.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
